VIROLOGY FOR NON-VIROLOGIST **by Roberto Ligugnana**

Roberto Ligugnana, who resides in Milan, Italy, is an agronomist that dedicated an important part of his scientific carrier to the environmental microbiology of the air. He has been the Secretary of the Italian Society for Applied Microbiology (SIMA).

In the 1970s, he and his brother Sandro invented and presented a new generation of the first portable microbiological and viral air samplers, which are still used worldwide today. The viruses present in the air are aspirated and collected on a liquid that is then tested by the molecular methods for their identification.

Roberto Ligugnana is the author of the “Virology for non-virologist” document dedicated to the people that are interested to know the life of the virus present on our planet. One scope of the document is the presentation of simple information about the virology.

All the subjects of the booklet are presented in a simple way by “comics” to facilitate the comprehension for non-virologist and is valid for young and old generations.

The book is dedicated to the education of the staff that works in hospital, health laboratory, pharma companies.

INFLUENZA A VIRUS
